SUMMARY

With over 12 years experience working with client engagement in the health and fitness industry. I have successfully played the various roles both specific to my business and to business overall these include: personal training, management, coaching, business ownership, member sales, business to business sales, and staff training and development. I am known for my positive outlook, attention to detail, and ability to create excellent working relationships with clients, and co-workers. I have the ability to adapt to changing environments and situations, and I look forward to applying many of these abilities and skills as a back-end or full-stack web-developer.

TECHNICAL SKILLS

Languages: HTML5, CSS, JavaScript, JQUERY, DOM, Node.JS, APIs

Applications: jQuery, Bootstrap, Moment.js

PROJECTS

HomeWork Helper | <https://github.com/VScacchitti/HomeworkHelper> | <https://vscacchitti.github.io/HomeworkHelper/>

- This project was designed to help students adapt to the world of virtual learning. It was designed to help students stay organized and engaged in the virtual classroom.
- My core responsibilities were working with our API's, and coding the JavaScript functionality of the draw, English and math pages.
- Languages: HTML, CSS, JavaScript, jQuery, Document Object Model, multiple APIs.

QuizAPP | <https://github.com/VScacchitti/QuizApp> | <https://vscacchitti.github.io/QuizApp/>

- This quiz is timed, begins on a start button, the quiz lets a user know if they are correct or incorrect by showing red or green on the selected answer. The top 5 quiz scores are saved onto a High Scores page where the user can enter their initials or name, and their score will be saved to local storage if it is one of the top 5.
- I did all development on this application.
- Languages: HTML, CSS, JavaScript, Document Object Model (DOM).

WeatherDash | <https://github.com/VScacchitti/WeatherDashboard> | <https://vscacchitti.github.io/WeatherDashboard/>

- WeatherDash allows you to search for current and 5-day extended forecast conditions for any city just by searching! This app uses an open weather API to pull current conditions such as temperature, humidity and wind speed!
- I did all the development for this application.
- Languages: HTML, CSS, JavaScript, Document Object Model (DOM), jQuery, OpenWeather API
